## Overview of AIWAF-VE menu

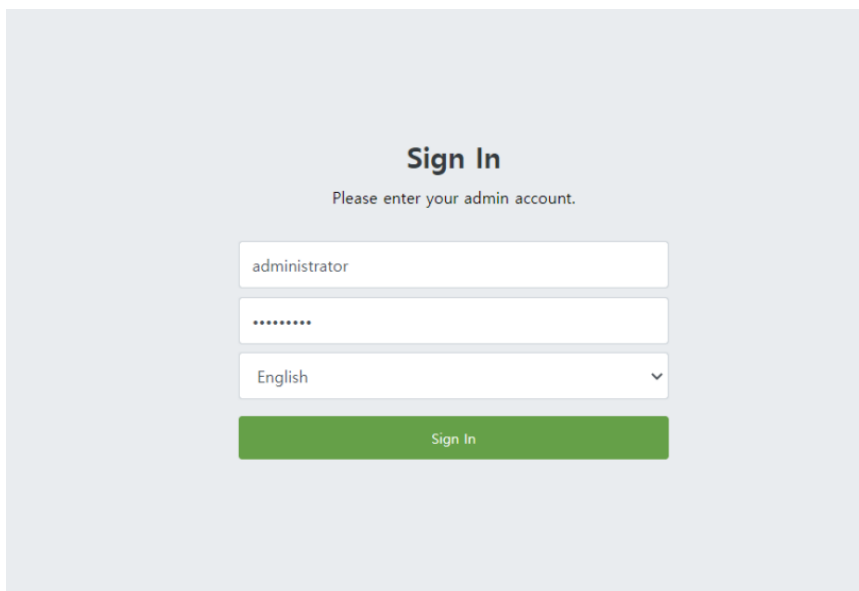

Menu	Description
Monitoring	Provides a centralized visual representation of web traffic, system information, detection counts, detection severity, and the detection log of your web server. It is a user interface that allows users to monitor and analyze real-time or historical data in a concise and easily understandable format.
Log analysis	Provides a platform for analyzing and interpreting detection log, audit log, and web server status log data. This menu is designed to assist users in gaining insights from large volumes of log entries, uncovering meaningful patterns, trends, anomalies, and security-related information.
Report	Generating, viewing, and managing various types of reports (detection log, web traffic, web accelerator, system, and policy settings) that summarize and present information from the registered domain. This menu provides a concise and organized overview of data, metrics, trends, and analysis results.
Policy settings	Configuring and managing the protected web server along with the security policies that govern the behavior of the AIWAF-VE. This menu empowers administrators to configure and fine-tune security policies, determining how the AIWAF-VE detects, prevents, and responds to potential threats targeting web servers.
Configurations	Offers various configurations for AIWAF-VE, including administrator, system, NIC, product settings, log management, and service control.

# Configuration of AIWAF-VE

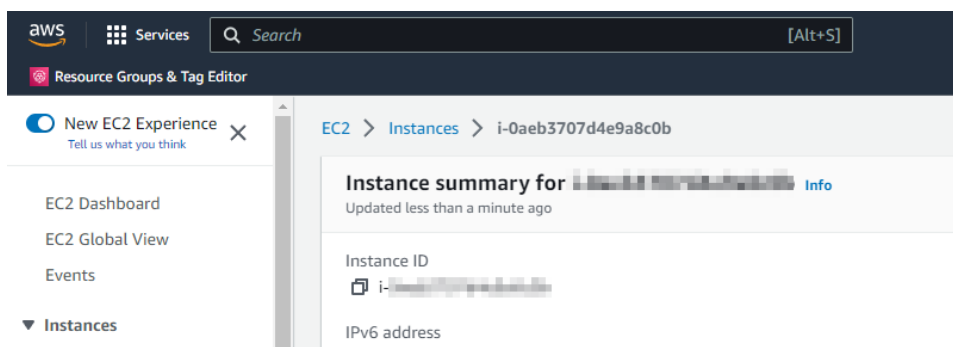

## 1. Subscribe AIWAF-VE BYOL or PAYG

- Subscribe AIWAF-VE BYOL or PAYG in the AWS Marketplace.

## 2. Access the Web User Interface (UI):

- Open your internet browser and access by entering the assigned IP from the AWS instance as follows: 'https://[AIWAF-VE IP]:222'. (e.g., <https://192.168.10.110:222>)
- Please change the language before sign in. (Supported languages: English, Japanese, Korean)
- Login with the provided ID and Password (ID: **administrator**, PW : **[instance ID\*]**)

- \* The Password instanceID for the initial connection is not the alphabet instanceID, but the actual instanceID that you can find in the AWS Management Console for launching AIWAF- VE.

### ! NOTE

- After your first login, please change the **default ID** and **Password** and **specify Allowed access IPs** for the security.
- Password change menu location : Configurations → Administrator settings → click 'Change' button.

### 3. Register Your License(AIWAF-VE BYOL only):

APPLICATION INSIGHT WAF

The screenshot shows the 'APPLICATION INSIGHT WAF' configuration interface. The top navigation bar includes 'Monitoring', 'Log analysis', 'Report', 'Policy settings', 'Configurations', 'Administrator settings', 'System settings', 'NIC settings', 'Product settings', 'Log management', and 'Service control'. The 'Product settings' section is active, showing 'Online update' and 'License update' tabs. Under 'Online update', there are two radio buttons: 'Use' (selected) and 'Not use'. Below this is the 'Activation Code' field, which is a sequence of four 4-character fields followed by a 12-character field, with a 'Check' button. The 'Server address' section has two radio buttons: 'IP:' and 'Domain:' (selected). The 'Domain:' field is empty, and the 'Port:' is set to '443'. There is a lightning bolt icon next to the port field. Below the 'Server address' section is the 'HA settings' section, which has a 'Not use' radio button selected and an 'Active-Standby' radio button. There are 'Apply' buttons at the end of each section.

- If you are **BYOL user**, you need to register your license to start AIWAF-VE. PAYG user can skip this step and proceed to the next page.
- Access: **Configurations** → **Product settings** → **License management** → **Online update**.
- Choose your online update preference (enable/disable).
- Enter the Activation Code and click '**Check**' to validate.
- Click '**Apply**' to complete license registration.

## 4. Time Zone and Language Settings:

### APPLICATION INSIGHT WAF

The screenshot shows the 'Configurations' tab in the APPLICATION INSIGHT WAF interface. The left sidebar lists various settings, with 'Time zone settings' selected. The main content area displays the 'Time zone settings' configuration, showing the current time as 'Tue Aug 22 8:45:14 KST 2023' and the time zone as 'Asia/Seoul'. Below this, there is an 'SNMP GET settings' section with a radio button for 'SNMPv2' selected. An 'Apply' button is visible at the bottom right of the settings area.

- Time zone Setup: Configurations > System Settings > Time zone Settings

### APPLICATION INSIGHT WAF

The screenshot shows the 'Configurations' tab in the APPLICATION INSIGHT WAF interface, specifically the 'Product settings' sub-tab. The left sidebar lists various settings, with 'Language settings' selected. The main content area displays the 'Language settings' configuration, showing the language as 'English'. Below this, there is a 'License management' section with a 'Product license' option. An 'Apply' button is visible at the bottom right of the settings area.

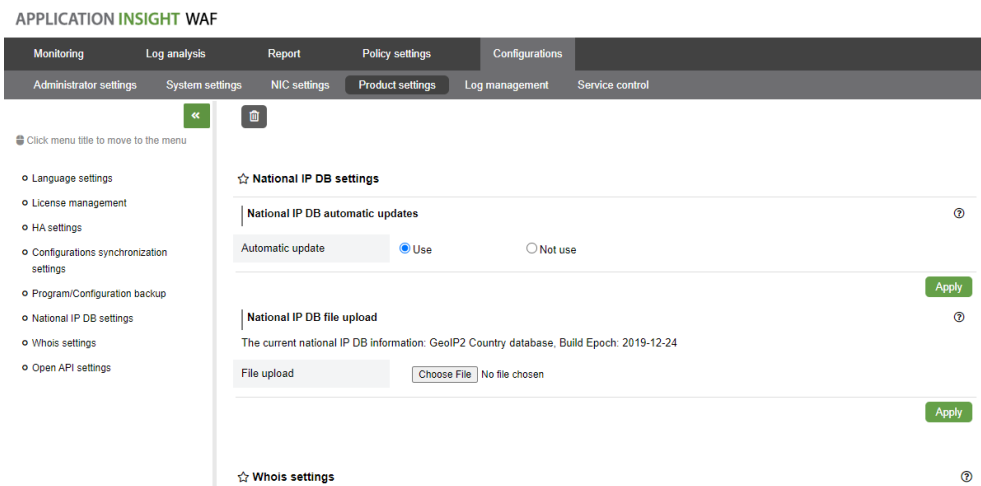

- Language Setup: Configurations > System Settings > Language Settings

## 5. Update Signature and Geolocation DB:

- You need to update the pattern signatures and geolocation database.

- [Signature Update] To access, go to: **Policy settings** → **Default settings** → **Pattern update settings** → **Online pattern update**.
- If the checkbox displays 'The current pattern version is the latest version' it indicates that the latest pattern is applied.

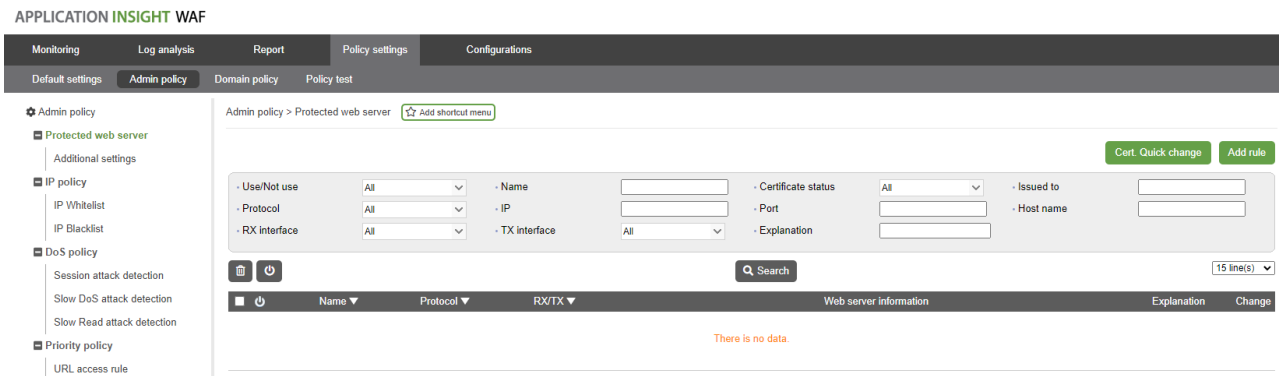

- [Geolocation Update] To update geolocation information, follow these steps: Go to **Configurations** → **Product settings** → **National IP DB settings**. Enable automatic updates 'Use' and click 'Apply.'
- Once you see the 'Completed' message, you can proceed to the next step.

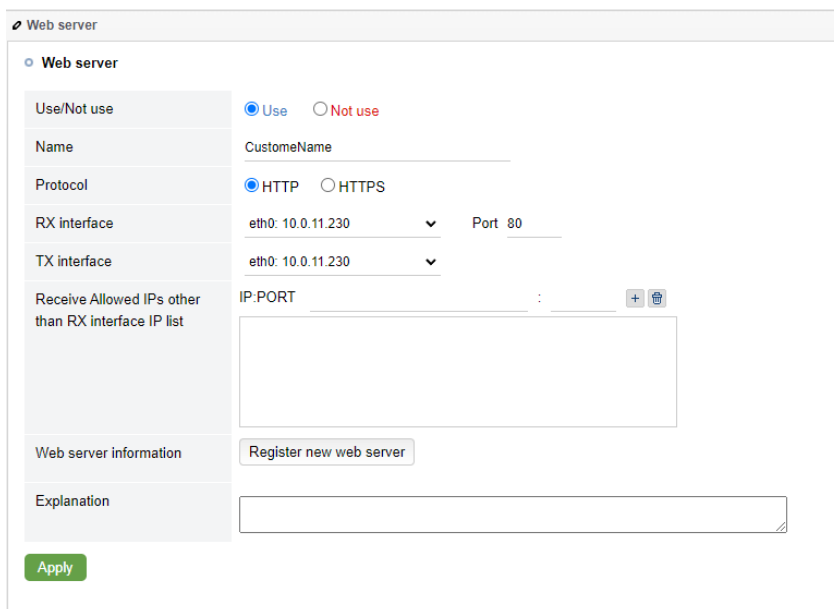

## 6. Register Protected Web Servers:

- HTTP and HTTPS (page #11) have separate registration procedures for protected websites. Follow the relevant procedure based on the website's protocol.

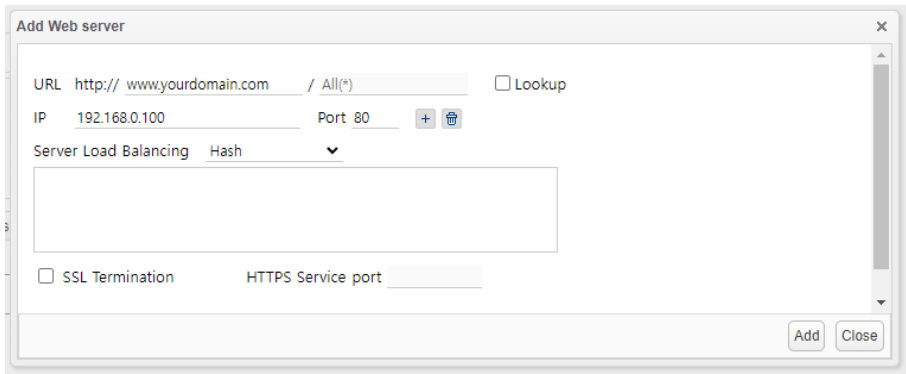

### 6-1. Register HTTP Web Servers

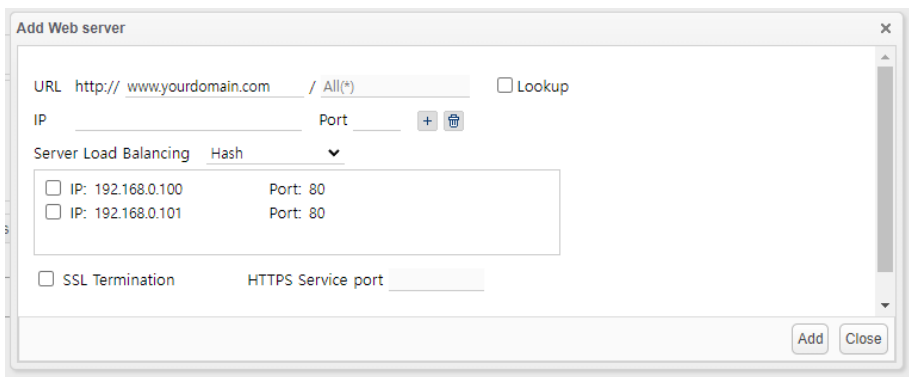

- To access, go to **Policy settings** → **Admin policy** → **Protected web server**, then click 'Add rule'.  
 ✓ No need for changes as HTTP is set as the default configuration.

- Enter a custom name for the web server registration and then click 'Register new web server'.

- Put your **protected URL**, **IP address** and **Port number** and click '+'
- For servers with dynamic IP, use Lookup option for alias registration.

- Once you have confirmed that the entered value is applied correctly, click '**Add**' to continue.

- In the 'Protected web server' menu, you can see the registered web server.

## 6-2. Register HTTPS Web Servers

- Access: Policy settings → Admin policy → Protected web server → Click 'Add rule'

- Enter a custom name, ensure 'HTTPS' is checked, and then click 'Register new web server'.

## Configuration

\*\*If you do not use SSL offload, you do not distinguish whether a URL has a path.

SSL Offload

URL   Lookup

IP  Port

Server Load Balancing

HTTP Service port   Replace response data

Select the other protected web server   Web server

Certificate file  No file chosen  Automatic register  Certificate file format (pfx)

Private key file  No file chosen

SSL Connection priority  Client  Server

Extension function  Verify Server HTTP/2 Support

Not-allowed SSL Version  SSL handshake denied  Block page    Create log

- Put your **protected URL**, **IP address** and **Port number** and click '+'
- For servers with dynamic IP, use Lookup option for alias registration.

\*\*If you do not use SSL offload, you do not distinguish whether a URL has a path.

SSL Offload

URL   Lookup

IP  Port

Server Load Balancing

IP: 192.168.0.100 Port: 443

IP: 192.168.0.101 Port: 443

Select the other protected web server   Web server

Certificate file  No file chosen  Automatic register  Certificate file format (pfx)

Private key file  No file chosen

SSL Connection priority  Client  Server

Extension function  Verify Server HTTP/2 Support

Not-allowed SSL Version  SSL handshake denied  Block page    Create log

- Verify the registered IP address and port number.
- Register the '**Certificate file**', '**Private key file**' and click '**Certificate verify**' to proceed.

## Configuration

The screenshot shows the 'Add Web server' configuration window. At the top, there are dropdown menus for 'protected web server' (set to 'Not Use') and 'Web server' (set to 'Not Use'). Below these are fields for 'Certificate file' (with a 'Choose File' button and the path 'monitorapp...23\_server.crt') and 'Private key file' (with a 'Choose File' button and the path 'monitorapp...23\_key.pem'). There are checkboxes for 'Automatic register' and 'Certificate file format (pfx)'. A dropdown menu shows '\*.monitorapp.com'. The 'SSL Connection priority' has radio buttons for 'Client' and 'Server', with 'Server' selected. The 'Extension function' has a checked checkbox for 'Verify Server HTTP/2 Support'. The 'Not-allowed SSL Version' has radio buttons for 'SSL handshake denied', 'Block page', and 'The default block page', with 'Block page' selected. The 'Encryption algorithm preference settings' has radio buttons for 'Client' and 'Server(AIWAF)', with 'Client' selected. A red box highlights the option '[Client SSL Automatic selection of versions and algorithms]'. Below this, there are dropdown menus for 'Client SSL version' (set to 'TLSv1.3') and 'Maximum Allowable Protocol' (set to 'TLSv1.0'). The 'Client Encryption algorithms' section has two lists of algorithms with checkboxes and 'Add'/'Delete' buttons. The first list has 'ECDHE-RSA-AES256-SHA', 'DHE-RSA-AES256-SHA', 'DHE-RSA-CAMELLIA256-SHA', and 'AECDH-AES256-SHA' checked. The second list has all options unchecked. At the bottom right are 'Add' and 'Close' buttons.

- Once you've confirmed the certificate file and private key, proceed with the detailed configuration of the web server, including SSL/TLS versions and cipher suites, if necessary.
- Additionally, for [Client SSL Automatic selection of versions and algorithms], input the domain and IP to scan the cipher suite of the web server you are registering.

The screenshot shows the 'Add Web server' configuration window with a 'Cipherscan' dialog box overlaid. The dialog box is titled 'Cipherscan' and contains the text: 'Please enter server information. Please enter both IP and domain information for accurate scan results when use Multi-domain.' There are two input fields: 'IP' with the value 'https:// 8.8.8.8' and 'Domain' with the value 'https:// www.google.com : 443'. A green 'Search' button is at the bottom right of the dialog box. The background window shows the 'Certificate file' field with 'No file chosen' and the 'Private key file' field with a 'Choose File' button. The 'Client SSL version' dropdown is set to 'TLSv1.3'.

- Enter the IP and domain information. The web server scanning will automatically select the SSL version and algorithms for the web server.
- After completing the previous steps,, click 'Add' to register web server information.

<input type="checkbox"/> URL Encryption policies	0 Case(s)
<input type="checkbox"/> API policies	0 Case(s)

Apply policy Restored to the previous policies.

**Restore policy**

- After registering the web server, configuring its details, and making changes to various policies, remember to click '**Apply policy**' in the Admin policy section of the upper-level menu to implement the changes. Otherwise, the changes will not be applied. (Previous policies will be backed up.)
- To access: **Policy settings** → **Admin policy** → **Policy apply/cancel** → click '**Apply policy**'.

## 6-4. Security Policy Block Mode Configuration

### APPLICATION INSIGHT WAF

The screenshot shows the 'Operation mode' configuration page in the Application Insight WAF interface. The top navigation bar includes 'Monitoring', 'Log analysis', 'Report', 'Policy settings', and 'Configurations'. Below this, there are sub-menus for 'Default settings', 'Admin policy', 'Domain policy', and 'Policy test'. A left sidebar lists various configuration options, with 'Operation mode' selected. The main content area shows the 'Operation mode' configuration, where 'Block mode' is selected. The 'Bypass target' section has a table with the following entries:

Request	Header name:Value
<input type="checkbox"/> [Request/Response]	Content-Type:application/vnd.ms.wms-hdr.asfv1
<input type="checkbox"/> [Request/Response]	Content-Type:application/x-mms-framed
<input type="checkbox"/> [Request/Response]	Content-Type:application/x-wms-getcontentinfo
<input type="checkbox"/> [Request/Response]	Content-Type:application/x-wms-LogStats

The 'URL Path' is set to 'HTTP' and the 'URL extension' is empty. The 'Detection mode targets' section is currently empty. An 'Apply' button is located at the bottom right of the configuration area.

- To access, go to **Policy settings** → **Default settings** → **Operation mode**
- The default operation mode of AIWAF-VE is 'Detection.' Click on 'Block' and press 'Apply' to proceed.

### APPLICATION INSIGHT WAF

This screenshot shows the 'Apply policy/Cancel' dialog box overlaid on the 'Operation mode' configuration page. The dialog box contains the text: 'There is a policy that has been changed. Do you want to apply the policy?' and has two buttons: 'Apply policy' and 'Cancel'. Below the dialog box, the 'Operation mode' configuration is visible, showing that 'Block mode' is selected. The 'Bypass target' table is the same as in the previous screenshot. The 'Apply' button from the previous screenshot is also visible at the bottom right.

- When making changes, you'll see the 'Apply policy/Cancel' box on the left. Select 'Apply policy' to save and apply the modified settings.

## APPLICATION INSIGHT WAF

The screenshot shows the 'Policy apply/cancel' section of the APPLICATION INSIGHT WAF configuration interface. The navigation menu includes 'Monitoring', 'Log analysis', 'Report', 'Policy settings', and 'Configurations'. Under 'Policy settings', there are sub-menus for 'Default settings', 'Admin policy', 'Domain policy', and 'Policy test'. The left sidebar shows 'Domain management', 'Domain policy', and 'Default'. The main content area displays a table with columns 'Domain' and 'Changed items'. The table contains one row for 'Default' with '0 Case(s)'. Below the table, it states 'Total count(s) : 1 Case(s)'. There are two green buttons: 'Apply policy' and 'Restored to the previous policies.'

- To apply the blocking policy completely, you need to change the **Detect** setting to **Block** for each individual security policy per domain.
- To access, go to **Policy settings** → **Domain policy**
- Click '**Default**' to manage each security policy. (The default page refers to the basic rule settings applied to the web pages users have registered(5-1, 5-2).)

## APPLICATION INSIGHT WAF

The screenshot shows the 'Vulnerability attack detection' section of the APPLICATION INSIGHT WAF configuration interface. The navigation menu is the same as in the previous screenshot. The left sidebar shows 'Domain management', 'Domain policy', and 'Default'. The main content area has a search bar with fields for 'Applied URL', 'Rule name', 'Use/Not use', 'Action', 'Mail', and 'Risk'. Below the search bar, there are buttons for 'Batch change use/not use of policies' and 'Batch change action of policies'. The main content area displays a table of rules with columns for 'Rule 1Count(s)', 'Detect 1Count(s)', and 'Block 0Count(s)'. The rules listed are: SQL injection, LDAP injection, Cross site script, Cookie forgery, CSRF detection, Malicious file upload detection, Malicious file access detection, Command injection detection, Directory access detection, Vulnerable page access detection, System file access detection, Web server vulnerability detection, Header vulnerability detection, Application vulnerability detection, and Scanner/Proxy/Spambot detection.

- All default rules are set to '**Detect**'. Please click on the rule you want to change.

# Configuration

Vulnerability attack detection

SQL Injection Rule 1 Count(s) Detect 1 Count(s) Block 0 Count(s)

Add rule View header Apply

Rule name	Client IP	Server URL	Unused patterns	Schedule	Explanation	Action	Log	Mail	Risk	Change
SQL Injection	All IPs	All URLs	0 Case(s)	Always

CSRF detection Rule 1 Count(s) Detect 1 Count(s) Block 0 Count(s)

Malicious file upload detection Rule 1 Count(s) Allow 0 Count(s) Detect 1 Count(s) Block 0 Count(s)

- You'll notice that the SQL injection security rule has been switched from 'Detect' to 'Block'.
- You can refer to page 22 to review actual log data (detection, blocking data).

## 7. Complete Configuration:

- Your configuration is now set. You can monitor web traffic at **Monitoring** → **Dashboard**.

# Testing AIWAF-VE: Procedure for Test

If you're looking to conduct a test with AIWAF-VE, follow these steps. Please note that the client (visitor) for this test scenario is designed around the Windows OS.

## Step 1: Redirect Test Traffic to AIWAF-VE:

To direct test client (visitor) traffic to AIWAF-VE, adjust the DNS information using the procedure below. In an actual network setting, you would typically modify the A record or CNAME of the domain name server. However, in this example, we're outlining a process that involves changing the contents of the hosts file.

- Launch Notepad as a Windows administrator.
- In Notepad, navigate to File and choose Open.
- Locate the hosts file path and open it using Notepad.
- Windows hosts file path: **C:\Windows\System32\drivers\etc\hosts**
- Register the IP of AIWAF-VE along with the domain name of the protected web server.
- Example: **[AIWAF-VE IP] [Domain] (e.g., 192.168.10.110 www.yourdomain.com)**
- Save the hosts file.

## Step 2: Send Sample Traffic to AIWAF-VE:

Generate sample detection traffic from the client (visitor) PC to AIWAF-VE.

- Open an internet browser.
- Enter the following values in the URL address input:  
URL: **http://www.yourdomain.com/?monitorapp=monitorapp**

## Step 3: Verify Attack Detection:

Check if the attack is logged in AIWAF-VE's detection log.
